CS232 Tree Postorder Traversal 01 - Fill In Handout

Given the following binary tree and PostOrder algorithm determine the traversal order

Postorder(binTree:BinaryTree): void
    If(binTree is not empty)
        Postorder(left subtree of binTree's root)
        Postorder(right subtree of binTree's root)
        Visit the root of binTree
